

PHONEBOOK MANAGEMENT SYSTEM

What is Phonebook Management System?

- It is an application that allow users to store new contacts, update them and also delete them.
- The application provides facility to store the details of all the contacts and other persons that are associated with it.
- The purpose of the system is to organize the list of all available contacts such as by inputting names and contact numbers.

What is the need?

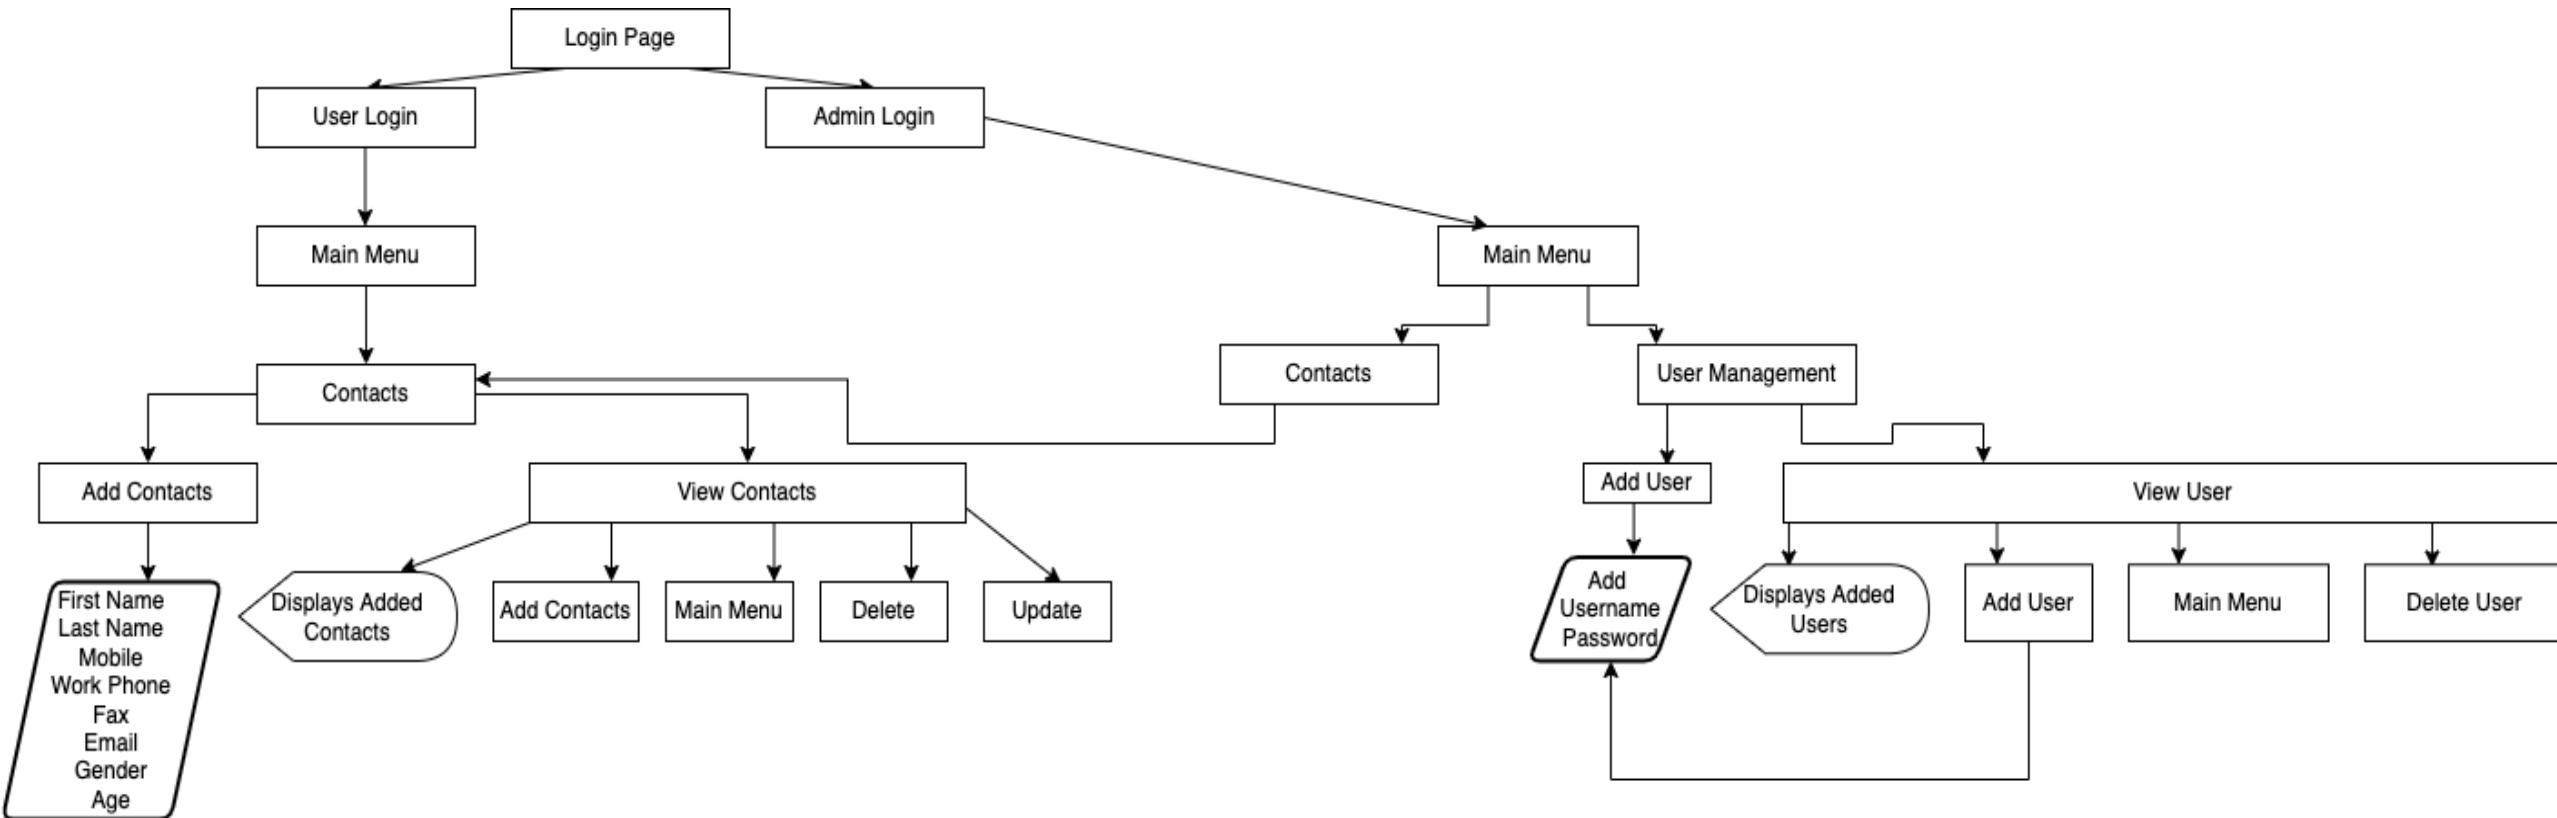

It is difficult to store all the information manually or by hand on a greater extend. It is waste of time, Therefore to minimize the time and make work easy we use this application.

Maintenance of database to store the application details. Cost for the storage space to store the details.
